

IN THE SUBSTITUTE SPECIFICATION

Please cancel paragraph 019 of the Substitute Specification, as filed, and as amended by Examiner Evanisko in the Examiner's Amendment dated December 21, 2006. Please substitute replacement paragraph 019, as follows:

[019] The printing group depicted in Fig. 2 can be configured, for example, as part of a nine[six]-cylinder satellite printing group, wherein four cylinder pairs, each cylinder pair consisting of a forme cylinder 01a and of a transfer cylinder 01b, are arranged in a frame, preferably in separate cylinder pairs, and positioned diametrically around a common counter-pressure cylinder 30, as shown in Figure 7, in a preferably identical distribution, so that forces acting when the cylinder pairs are placed against the counter-pressure cylinder are mutually supported. The forme cylinders 01a and the transfer cylinders 01b each have the characteristics directed to the attainment of the object proposed for the present invention. The counter-pressure cylinder 30 preferably has a smooth, i.e. closed, outer shell 33 without openings.
